INNOVATION & SUSTAINABILITY

Excellence, Innovation and Sustainability. The jet evolution our industry was waiting for.

The Lifestream Jet Collection

In a market focused on a fixed spectrum of spa jet types and methods, Balboa has set out with a new approach to building spa jets to bring the most innovative and sustainable solutions to market. With expert craftsmanship, unique designs, excellent precision and superior quality, the new Lifestream Jets are engineered with a patent-pending interlocking technology, which allows the jets to easily lock in place regardless of any high temperatures or shell movement. Available in three different body sizes and four different jet faces. The jet evolution our industry was waiting for.

LIFESTREAM JET COLLECTION

1.

2" & 2.75" Jet Collection

- 1. 222001-XX (50.8mm) Lifestream 2" Directional Jet**

22520-XX 5" Jet Body

22590BL 5" Grommet

Where meticulous attention to detail and
creativity come together to create a luxurious soak
focused on health and wellness.

LIFESTREAM JET COLLECTION

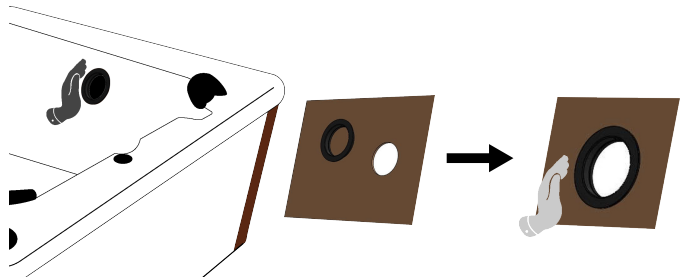

INSTALLATION INSTRUCTIONS

Tools Used:

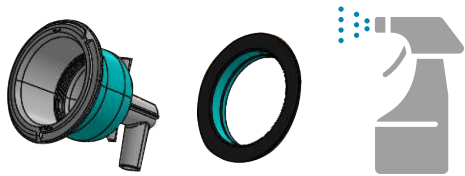

- Hole Saw
- Water or Water-based Lubricant
- Mallet

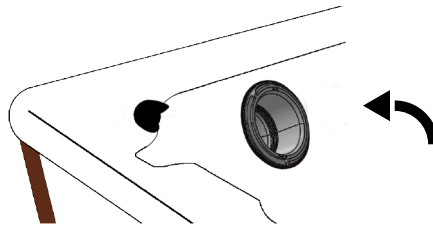

Step 1:
Using a hole saw, drill a hole in the hot tub shell for the jet body size being installed.

Step 2:
Push the grommet into the hole in the hot tub shell until it is fully seated.

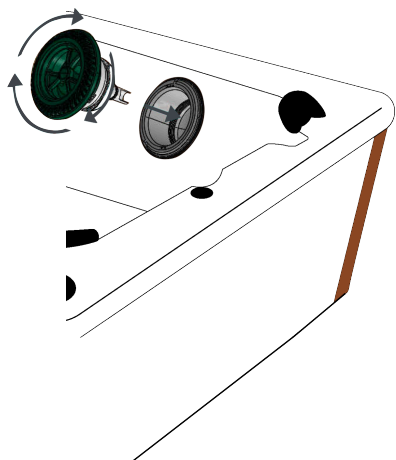

Step 3:
Spray the inside surface of the grommet as well as the outside surface of the jet body with water or water-based lubricant. Using a mallet, tap the jet body into the grommet until it is fully seated.

Note:

The jet body has indicators showing where the water and air connections are located. It is strongly advised to orient the jet body as desired before tapping the jet body into the grommet. Once fully seated, it is extremely difficult to modify the orientation of the jet body.

Step 4:

Thread the jet assembly into the jet body using a clockwise motion. The jet assembly will “click” into place.
